NSF Registration Guidelines for Proprietary Substances and Nonfood Compounds:

Handwashing and sanitizing products (Category Code E2): Combination of detergents-germicides (single step preparations designed to combine hand washing and sanitizing) will be considered for registration on the basis of their ability to effectively clean the hands as well as their germicidal equivalency to 50 ppm available chlorine. The hands need not be washed with soap or detergent prior to the use of such preparations. However, the hands must be rinsed with potable water after the use of the product and before handling food.

Hand sanitizing products (Category Code E3): Products manufactured from those solutions described in CFR Title 21, Section 178.1010, which are applicable for the purpose may be used to sanitize the hands of employees handling food products without a subsequent rinse provided they are germicidally equivalent to 50 ppm available chlorine. Products shall not contain perfumes leaving a residual odor on hands after usage. These sanitizing solutions may be used only after thoroughly washing hands with soap or detergent and water, followed by rinsing with potable water. In many instances, these hand sanitizers may be injected directly into wash/rinse water.

TCell™ Refills

The TCell™ odor control system dispenses a consistent level of fragrance and Microtrans® odor neutralizer.

- On-trend, consumer-preferred fragrances
- Standard setting: 60 Days
- Light setting: 90 Days
- No propellants or added VOCs

These exclusive, proprietary scents are offered individually or in a convenient "Preference Pack," which is a great solution for new customers to test and determine the right fragrance for their facility.

SMARTER CLEANING

The Rubbermaid HYGEN™ Clean Water System features a Filter Bucket and Wringer with built-in scrubbers to help loosen and remove debris from the mop. Twin rollers allow for optimized wringing efficiency, and an innovative filtering system processes dirty water into clean water with a simple tilt of the bucket.

ROLLER WRINGER

Twin roller design provides optimized wringer efficiency.

ADJUSTABLE MOISTURE LEVEL

Allows users to select desired mop dampness.

FLOOR DRAIN

Empties bucket without lifting.

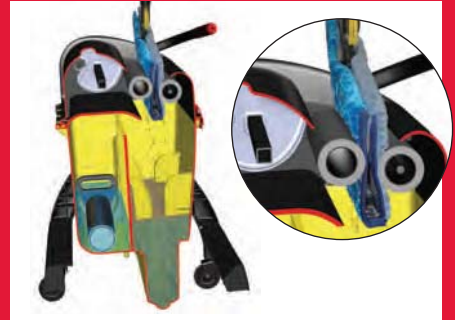

COMPLETE SYSTEM

Fits all Rubbermaid Commercial Products cleaning carts.

RINSING AND SCRUBBING

Insert the mop into the bucket. Move the mop up and down to enable the built-in scrubbers to remove soil from the mop.

WRINGING

Lift the mop to position it between the two rollers located at the top of the bucket. Press the handle down to wring the mop. Turn the adjustment dial to select your desired moisture level.

TRANSFERRING

Tilt the bucket 90 degrees by pressing the handle. This allows the dirty water to transfer to the chamber that has the integrated filter.

FILTERING

Once the water is completely transferred to the filter chamber, rotate the bucket back to its original position. Clean, filtered water will flow back into the mopping chamber, ready for mopping.

WAVEBRAKE®

WaveBrake's revolutionary bucket shape with molded-in wave breaks reduces splashing up to 40% for safer, easier, and more efficient mopping.

WaveBrake® Mopping Systems

Rubbermaid is the world's leading manufacturer of mop buckets.

Improve productivity and help reduce labor costs! WaveBrake® Mopping Systems reduce splashing for safer, easier, and more efficient mopping. WaveBrake® Mopping Systems can handle any mopping job with ease, in sizes from 26 quarts to 44 quarts.

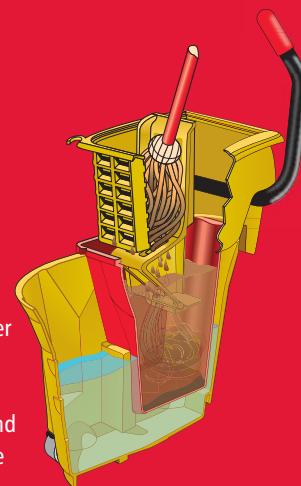

DIRTY WATER BUCKET

- Separates dirty water from clean water
- Preserves the quality and cleaning power of cleaning solution
- Reduces water and chemical usage
- Helps produce cleaner, less slippery floors
- Divides liquid weight; less lifting power needed when emptying buckets

HOW IT WORKS

Traditionally, wringers release dirty water directly back into the bucket's primary cleaning water.

Rubbermaid's Dirty Water Bucket nests below the WaveBrake® Wringer to collect the dirty water and keep it separate from the cleaning solution.

WET MOPPING

There are several important factors to consider when choosing a wet mop. Use the guidelines on the following pages to choose the best wet mop for your floor care needs.

GENERAL MOPPING

Choose mops with high absorbency, release, and durability. If laundering is available, launderable mops will be the most economical choice. Microfiber, synthetic, rayon, and blended fiber mops with looped ends and woven tailbands offer the best performance and launderability.

FINISH MOPPING

Look for microfiber, rayon, or synthetic mops for high absorbency and release. Construction features such as tailbands and looped ends provide for better floor coverage and less streaking.

LAUNDERABILITY/DURABILITY

The launderability of a mop is based on the number of commercial washing and drying cycles it can withstand before the construction of the mop is degraded or the performance declines. The durability of a mop is a measure of how long it will perform before needing to be replaced. Microfiber, synthetic, and blended fiber mops have the highest levels of launderability and are the most durable.

SYNTHETIC

RAYON

ABSORBENCY

The absorbency of a mop refers to its ability to pick up and hold liquid. Higher levels allow faster floor drying times, leading to greater productivity and worker safety. Microfiber, rayon, and cotton yarns have the highest absorbency.

MICROFIBER

RAYON

COTTON

BLEND

RELEASE

Release is the ability of a mop to disperse liquid onto the floor or during wringing. Higher levels allow faster and more complete wringing, as well as more efficient application of cleaning solutions on the floor. Microfiber, rayon, and synthetic yarns offer the best release of liquids.

Cleaning power is the ability of a mop to remove dirt from the floor.

Dust Mopping

There are several important factors to consider when choosing a dust mop. Use the guidelines on the following pages to choose the best dust mop for your floor care needs.

General Dust Mopping

Choose mops with high-dust pickup and durability. If laundering is available, launderable mops will be the most economical choice. Microfiber looped-end and twisted-loop mop heads with reinforced stitching and slip-on/slide-off backing offer the best performance and launderability.

Mop Construction Features

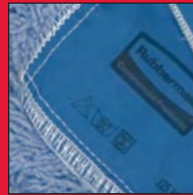

TWISTED LOOPS
Highly effective at capturing dust and dirt. Premium twisted loops are less prone to snags, frays, and unraveling during cleaning and laundering.

LOOPED ENDS
Reduce fraying and depling for better durability and longer product life. More effective than cut-end mops.

CUT ENDS
Economical construction for general purpose dusting.

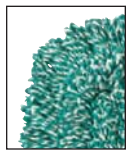

REINFORCED STITCHING
Reinforced, double-needle stitching at key "wear" points increases product life.

BACKING DESIGN
Slip-on/slide-off backing allows quick, easy setup for standard or breakdown mop frames.

Launderability

The launderability of a mop is based on the number of commercial washing and drying cycles it can withstand before the construction of the mop is degraded or the performance declines. Microfiber, synthetic, and blended fiber mops have the highest levels of launderability.

SYNTHETIC

Durability

The durability of a mop is a measure of how long it will perform before needing to be replaced. Microfiber, synthetic, and blended fiber mops are the most durable.

Mops with **antimicrobial fibers** have greater durability because they inhibit the bacterial growth that causes mop odor and discoloration.

Dust Pickup

Dust pickup is the ability of a mop to remove dust and dirt from the floor surface. Microfiber, blended fiber, and synthetic mops have the highest degree of dust pickup.

BROOM AND BRUSH CONSTRUCTION

Surface textures and types of dirt vary throughout a facility, so choosing the correct broom and brush construction is important for maximum cleaning effectiveness. Rubbermaid Commercial Products' brooms and brushes offer a complete range of blocks and fill types to clean virtually any surface.

BLOCK STRUCTURES

STRUCTURAL FOAM BLOCK

Resists cracking, splitting, warping, and rotting. Helps prevent bacteria growth. Two threaded holes provide long product life.

WOOD BLOCK

A classic look that resists moisture and helps prevent cracking. Two threaded holes provide long product life.

BLOCK AND FILL DESIGN

Staggered hole pattern prevents gaps in fill material for better performance. Dense fill leads to longer brush life. Flagged tips pick up fine dust and dirt particles. Flared ends allow access to corners.

FILL—NATURAL

HORSEHAIR

Very durable with a naturally flagged tip; good shear/break resistance. Will not scratch smooth or highly polished surfaces. Not for use on oily or wet surfaces.

PALMYRA

Medium to highly stiff fiber from the Palmyra Palm provides durability and good bristle recovery. Can be used wet or dry.

TAMPICO

Soft to medium stiff fiber from the Agave plant. Durable and retains shape after continual use. High resistance to heat, alkali, solvents, and acid. Can be used wet or dry.

FILL—SYNTHETIC

NYLON

Very durable with excellent abrasion resistance, shear/break strength, and bristle bend recovery. Will not stain, discolor, or absorb odors. Can be used wet or dry and resistant to alkalis and most solvents.

POLYSTYRENE

Extremely durable. Excellent bristle bend recovery and shear/break strength. Resistant to water, oils, and solvents. Not for sweeping compounds or oily surfaces.

POLYPROPYLENE

Very durable with good abrasion resistance and shear/break strength. Will not stain, discolor, or absorb odors. Resistant to solvents, acids, oils, fungus, and bacteria growth. Can be used wet or dry.

FILL—WIRE/METAL

BRASS

Provides a high degree of abrasion without severely scratching hard surfaces. Will not rust. Best for heavy cleaning of metal or brick surfaces that cannot sustain heavy scratches.

STAINLESS STEEL

Provides a high degree of abrasion and wear resistance. Resists chemicals and rust. Excellent bend recovery. Best for aggressively removing residue from metal or other resilient materials.

TEMPERED STEEL

Provides a high degree of abrasion and wear resistance. Good bend recovery. Best for aggressively removing residue from metal parts or brick work.

40 buckets of sheetrock compound weigh over 2,400 lbs—that's a load!

WILL NOT WARP, DENT, SPLINTER, RUST, OR ROT

Tough, resilient surface absorbs impact and provides quiet operation. Virtually maintenance-free; resistant to most chemicals, impervious to water damage, and easily cleaned.

Metal—dents and rusts

MOVE LOADS SAFELY AND EFFICIENTLY

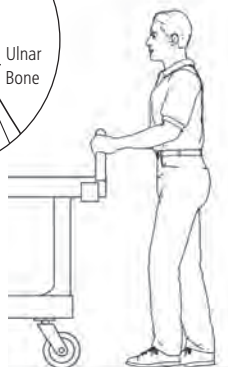

The variable grip-height handle on our carts and trucks improves maneuverability and reduces muscle strain for most every user, regardless of height.

TRADITIONAL CART HANDLE DESIGN

Angled handle helps keep wrist and bones in forearm aligned for optimum leverage while turning.

IMPROVED VARIABLE GRIP-HEIGHT HANDLE

DURAMOLD™

Duramold™ decks are formed from a precision-engineered resin and metal composite structure that is lighter than typical steel/wood products without sacrificing strength, which enables weight reduction and improved ergonomics.

PUT YOUR EFFORT INTO MOVING YOUR PAYLOAD, NOT YOUR TRUCK

DURAMOLD™ HAS THE HIGHEST STRENGTH-TO-WEIGHT RATIO

when compared to metal, wood, and solid plastic decks.

35%

lighter weight construction to transport the same payload

Duramold™ resin and metal composite structure is recyclable.

Convertible A-Frame Truck

Our unique design combines the bulk load capacity of standard panel trucks and bar stock trucks with the functionality of a heavy-duty two-shelf cart. Saves time and money by transporting oversized, heavy loads to your work site in one trip.

LIDS FOR EVERY NEED

1 SECURE-SEALING LID

Two-seal system makes this lid the most airtight of all the Rubbermaid options and is ideal for longer-term storage or air-sensitive foods. Easy-grip tab allows for easy removal of the lid from the pan.

2 PEG HOLE COVER WITH HANDLE

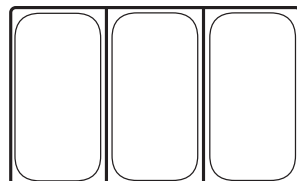

Peg hole allows pan to be hung and dry faster, helping to prevent health risks from standing water. Rubbermaid's peg hole solution is the only NSF-certified hanging solution on the market.

3 NOTCHED COVER WITH HANDLE

NSF-certified notch allows spoon to be easily available while food remains covered. Notch keeps spoon handle out of food, complying with FDA Food Code.

4 SOFT-SEALING LID

Seals on insert pan help reduce airflow to food, therefore maintaining food quality. No overlap on food pans allows easy use in transport.

**Oven-safe up to 375°F (191°C).

***DESIGNED TO EN 631-1 C.E.N. STANDARD**
 Developed by the European Committee for Standardization and based on a gastronorm modular system, ensures compatibility of the pans with other kitchen equipment.
